

Better care, clearer management, happier caregivers.

A nurse call system built on real-time indoor positioning – and much more.

Iiwari Care brings visibility, efficiency and calm to everyday life in a care home – while improving safety and enabling genuinely data-driven management.

✓ Benefits for staff

- Find residents, colleagues and important assets at a glance
- Automatic acknowledgement of nurse calls – no button presses, no unlocking the phone
- Help at the press of a button – a non-urgent or urgent call to the right person
- A live map view of the unit for night staff – more safety and a better sense of control
- Less noise and fewer interruptions – calls go straight to caregivers' phones
- Usability at its best – for example a spoken message to the assigned caregiver's phone, "Nurse call, room 1", without using the phone at all

✓ Benefits for residents

- Help always available, anywhere in the unit
- Features that add safety, such as exit alerts

✓ Benefits for management

- Real-time view of workload and response times
- Reports straight from the system – for example the amount of direct care per resident
- Response times visible – how quickly caregivers actually arrive
- Fact-based decision making and measurable quality
- Supports flexible staffing based on care needs

🔍 The chance to measure and improve:

- Interaction between caregivers and residents
- The impact of technology or new ways of working on care time
- The amount of documentation and how automation changes it
- Community life (time residents spend together)
- Reminders based on caregiver location (coming soon)

🌐 Already in use in Finland, the USA, the United Kingdom and Norway
